
Change ANYTHING in a video with AI, FAST AND EASY

BEFORE

AFTER

1 Grab a frame

Take a screenshot of the video you want to change. Any video, 4–30 seconds.

2 Make the new picture in ChatGPT

Upload your frame. Paste this prompt. Change the brackets to what you want.

YOUR FRAME

THE NEW PICTURE

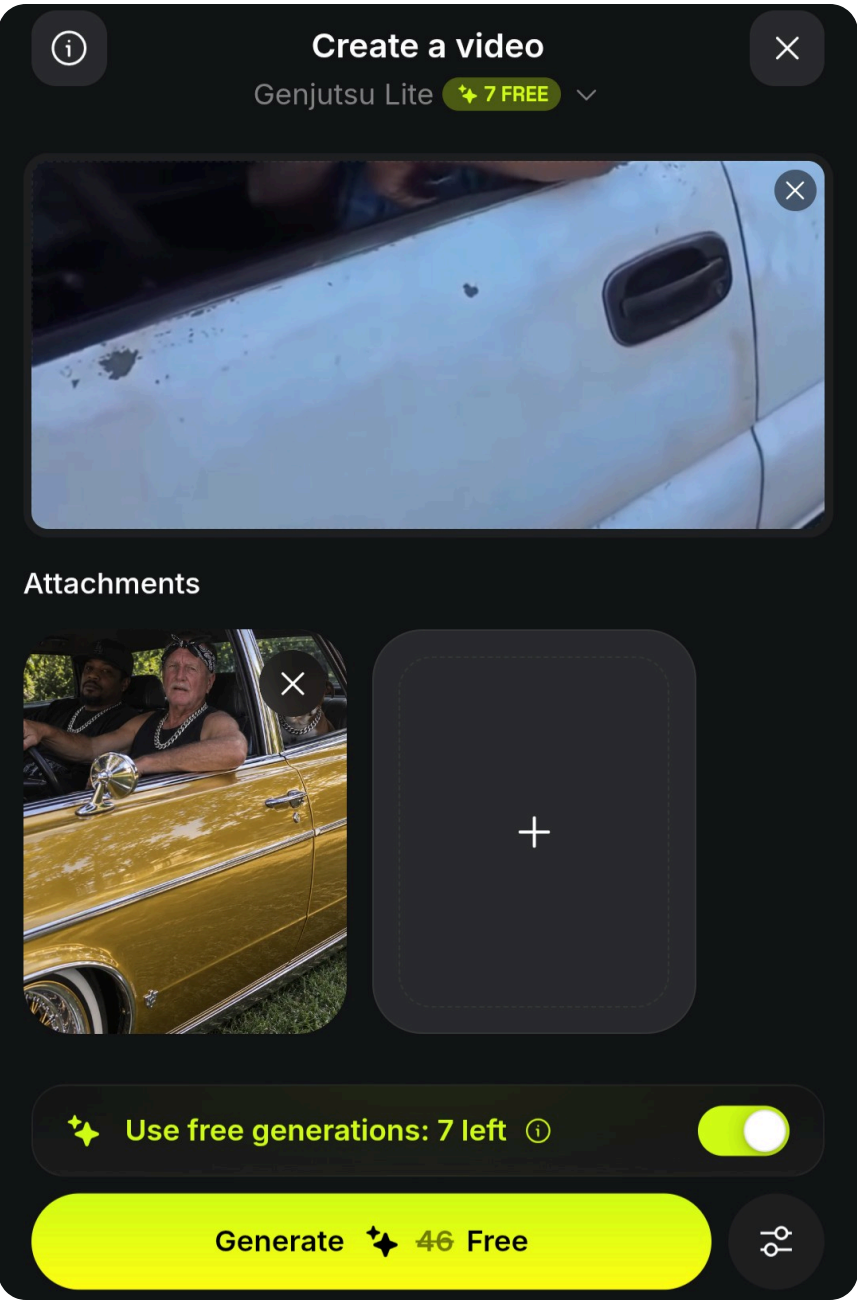

Phone: press and hold, drag to select, copy.

copy

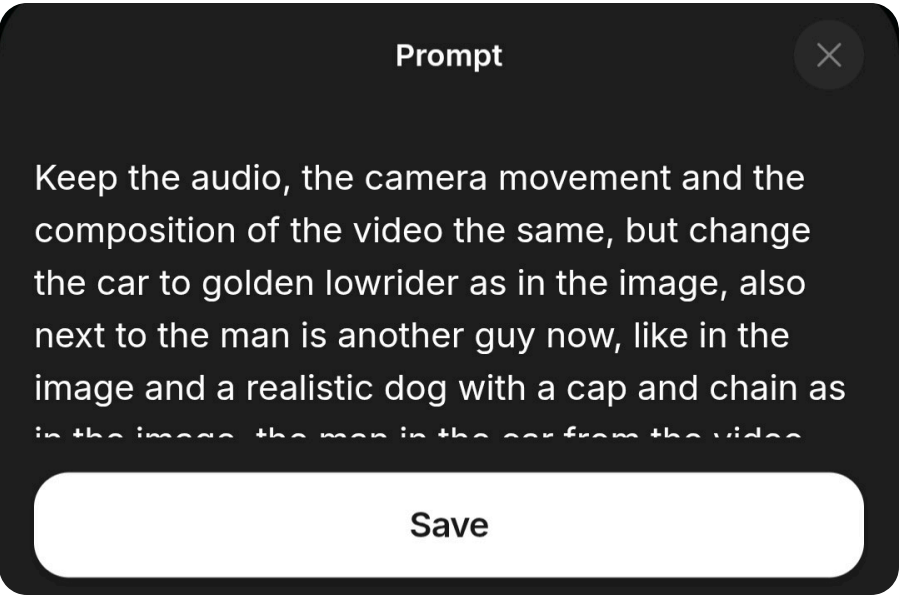

Keep **[THE MAN]** EXACTLY the same. Make the car a **[GOLDEN LOWRIDER]**. Put **[ANY CHARACTER]** next to him and **[A DOG WITH A CAP AND A CHAIN]** in the back.

3 Animate it in Higgsfield Genjutsu

Free: Genjutsu Lite has free generations.

- a Open higgsfield.ai, then Genjutsu.
- b Add your original video as the reference.
- c Attach the ChatGPT picture.
- d Paste the prompt below. Tap Generate.

copy

Keep the audio, the camera movement and the composition of the video the same, but change the car to golden lowrider as in the image, also next to the man is another guy now, like in the image and a realistic dog with a cap and chain as in the image, the man in the car from the video talks and moves exactly the same and the face is exactly the same and his voice and the audio is the same, but his clothes and the head band are changed as in the image, other than that the video has to be the same. The other man next to him with the blonde hair is natural and just waiting, the dog in the back is just being like a normal dog, ultra realistic (natural lighting)

Change the [car / people / clothes] to whatever is in YOUR picture.
