Try Desktop Rug

JOHN SAVAGE AI / FREE GUIDE

Sweep your messy desktop under a rug

A fake desktop with a real cloth-simulated rug. Grab it, fold it, throw it over your pile of icons. Free, in your browser, works on your phone.

01

Open the site

rug.johnsavageai.com

02

Drag to lift

Hold `⌘` / `Alt` to move

03

Right-click

5 designs, 5 sizes

04

On your phone

Two fingers, two hands

05

Prompt

Build it yourself

TRY IT FREE

Open the free rug and clean up your desktop

TRY IT FREE →

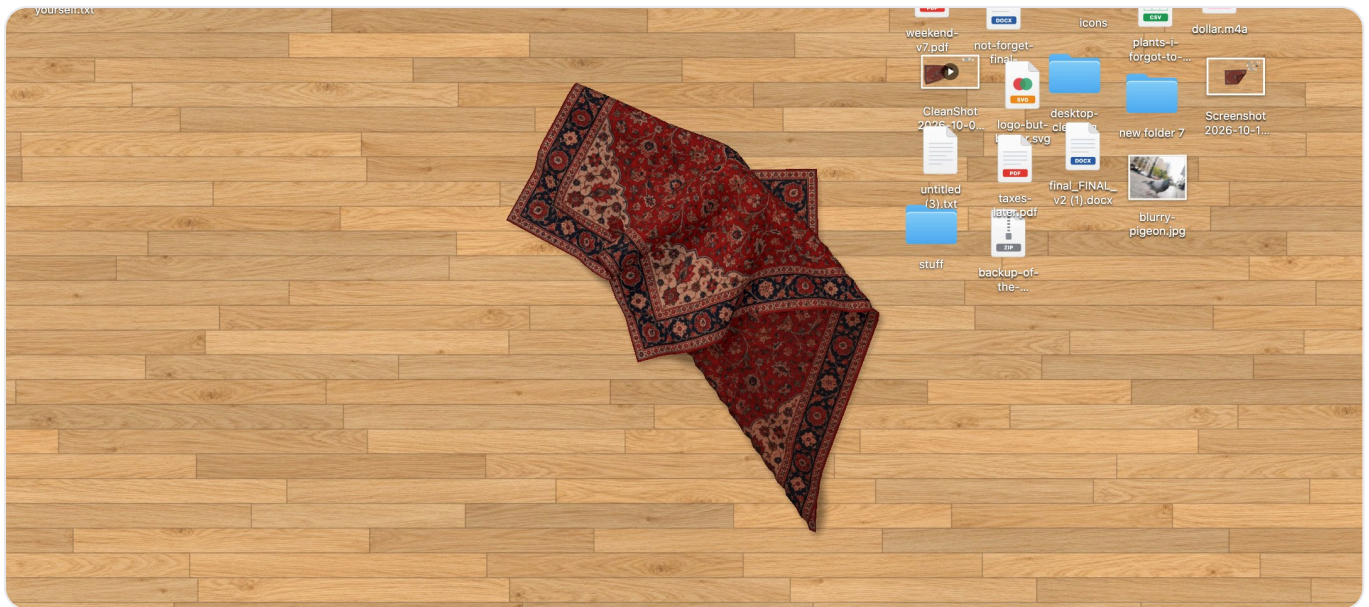

Made with Claude Opus 5.5

1 Open the site

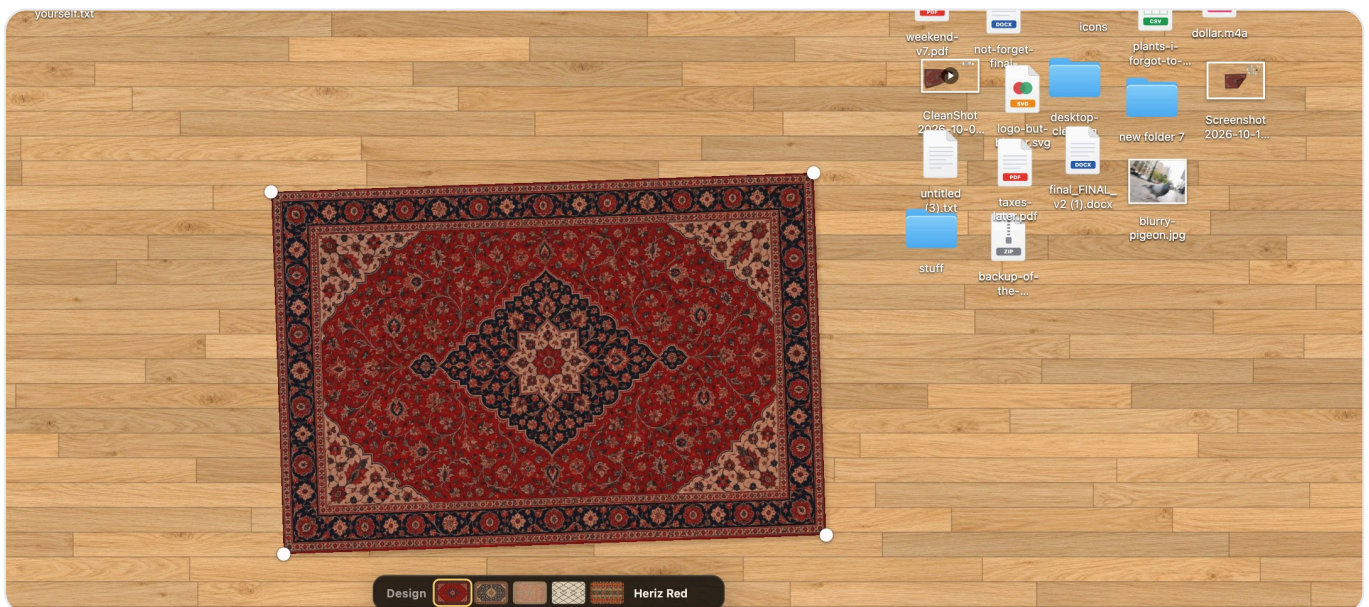

Go to rug.johnsavageai.com. You land on a fake desktop with a wood floor, a menu bar and a messy pile of files. Press **Got it** on the small welcome card.

2 Drag the rug to lift it, hold ⌘ / Alt to move it

Press and drag any point of the rug and it lifts right there, hanging like heavy wool. Pull a corner across and it folds over, showing the back side. Let go and the fold stays. Drag files onto the bare floor, flip the flap back and they are hidden under the rug.

DRAWING A CORNER LIFTS AND FOLDS THE RUG

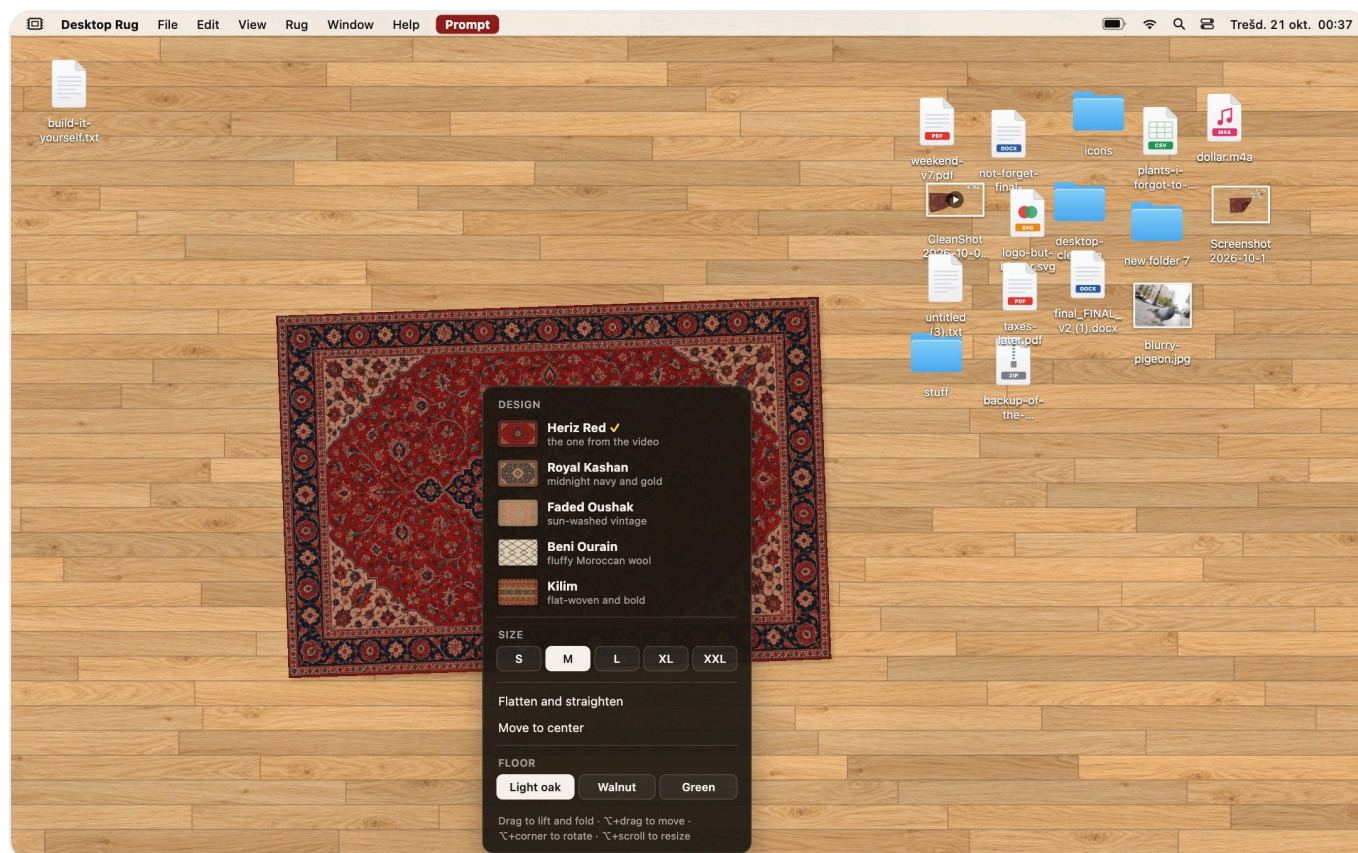

HOLDING ⌘ / ALT: CORNER DOTS AND THE DESIGN BAR

TIP Hold ⌘ (Alt on Windows) and the whole rug moves flat. Drag a white corner dot to rotate it.

TIP Scroll while holding ⌘ to turn and resize the rug. Double-click the rug for the same controls.

3 Right-click for 5 rug designs and sizes

Right-click the rug and a dark menu opens. Pick a **Design** (Heriz Red, Royal Kashan, Faded Oushak, Beni Ourain or Kilim) and a **Size** from S to XXL. **Flatten and straighten** resets the folds, **Move to center** puts it back, and the **Floor** buttons swap Light oak, Walnut or Green.

THE RIGHT-CLICK MENU

4 It works on your phone too

Open the same link on your phone. Every finger is its own hand: lift two corners, fold it in half, carry it like a sheet. Double-tap the rug, then pinch to turn and resize it.

TIP The rug and your file positions are saved on your device, so folds survive a reload.

ON A PHONE

Prompt: build Desktop Rug yourself

Press **Prompt** in the menu bar. The **Build Desktop Rug yourself** page opens with two prompts: **1 · The website** and **2 · The screensaver (Mac + Windows)**. Press **Copy prompt** (or **Download .txt**), paste it into Claude in an empty folder, then do the same with the screensaver prompt if you want it.

Build Desktop Rug yourself

Download .txt

Back to the rug

Stack: plain HTML/CSS/JS ES modules + three.js (r186, vendored locally in `vendor/` via an import map, no CDN, no build step). Files: `index.html`, `rug.js` (cloth + rendering + rug UI), `desk.js` (the fake desktop), `rug.css`, `assets/`. It must run from any static host and on phones.

How it must feel

- Seen straight from above, like a real desktop. The floor is the page background; the rug is drawn on a transparent full-screen WebGL canvas above the files and below the menu bar.
- I grab any point of the rug and it lifts there (to ~10% of the rug length), with the rest hanging and following like heavy wool. Pulling a corner across the rug folds it over and shows the **back side** (same pattern, darker and flatter).
- When I let go it drops, and **a folded part stays folded** (friction + self-collision), like a real rug. I drag files onto the bare floor, flip the flap back, and the files are hidden

THE "BUILD DESKTOP RUG YOURSELF" PAGE

HOW THE WEBSITE PROMPT STARTS

COPY

Build me "Desktop Rug": a website that looks like a computer desktop (wood-floor wallpaper, a menu bar, a messy pile of files) with a photorealistic Persian rug lying on it. The rug is a real cloth simulation: I can grab it, fold a corner back, drag my files under it and flip it back over them.

1

Copy **1 · The website** and paste it into Claude in an empty folder.

2

Want the screensaver? Open **2 · The screensaver (Mac + Windows)**, copy it and paste it into the same chat.

TIP Do the website first, then the screensaver. Each prompt is a single paste.

TIP You will also want an image generator for the rug and wood textures. Their prompts are inside the page.
