NOTION AI WORKFLOW

google flow rubber face stretch workflow

Upload a pre-recorded cheek-pull clip, paste the prompt below, and generate the exaggerated elastic face effect.

COPY + PASTE PROMPT

Turn the person's pretend face-stretching gesture into a real, exaggerated rubbery cartoon effect - smooth and clean, with no glitching, flickering, or warping artifacts. The moment their hands touch their cheeks, the face skin begins stretching outward, following the hand movement exactly and in sync from the video. As the hands pull outward, ALL facial features stretch elastically along with the skin - the eyes widen and stretch sideways, the mouth stretches wide, and the cheeks pull far out to the sides like elastic rubber, tracking the hand motion the whole time. At the end, when the hands let go and release the cheeks, the stretched face springs and shrinks smoothly back to its normal, natural shape, all features returning to normal proportions. Keep the exact same face, identity, skin tone, lighting, background, and camera framing throughout. Keep the mouth movements matched to the original speech.

Use after upload: select your source clip, then paste this entire prompt into Describe your edits.

simple workflow

Record -> upload -> paste prompt -> generate -> review

GOOGLE FLOW WEBSITE

<https://labs.google/fx/tools/flow>

1. Record clip

2. Upload video

3. Paste prompt

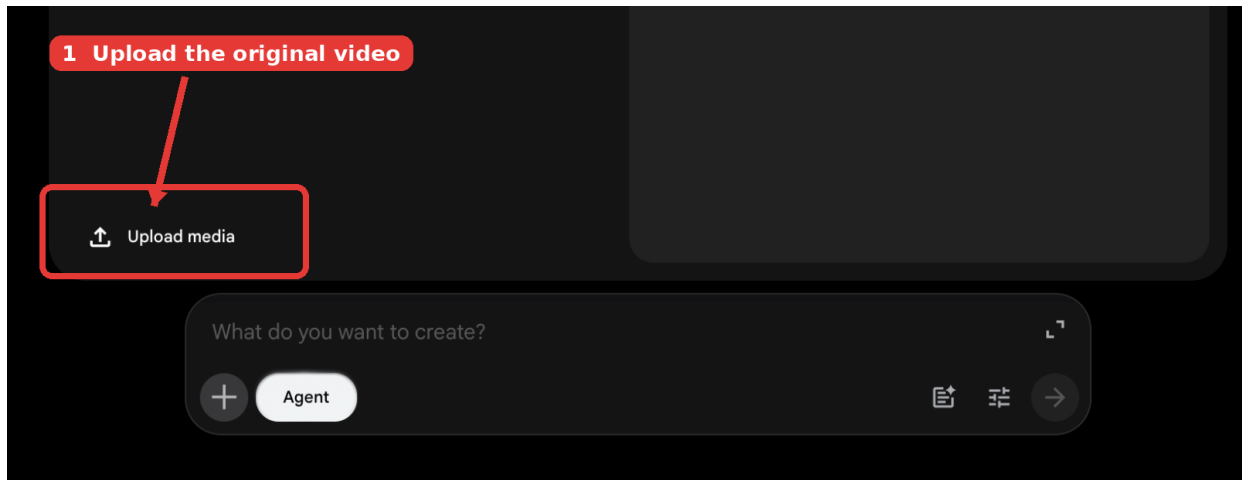

4. Generate

5. Review

Step 1 - Upload your pre-recorded video

Open Uploads, click Upload media, and select the original clip with the cheek-pull gesture.

Step 2 - Paste the prompt and generate

Select the uploaded clip. Paste the full Page 1 prompt into Describe your edits, then click the arrow to generate.

Before exporting: hands stay visible - face tracks the hand movement - mouth stays synced - identity and background stay unchanged - no flicker or warped frames.
