google omni 8-bit reel workflow

MAIN VIDEO PROMPT + BEFORE / AFTER EXAMPLE

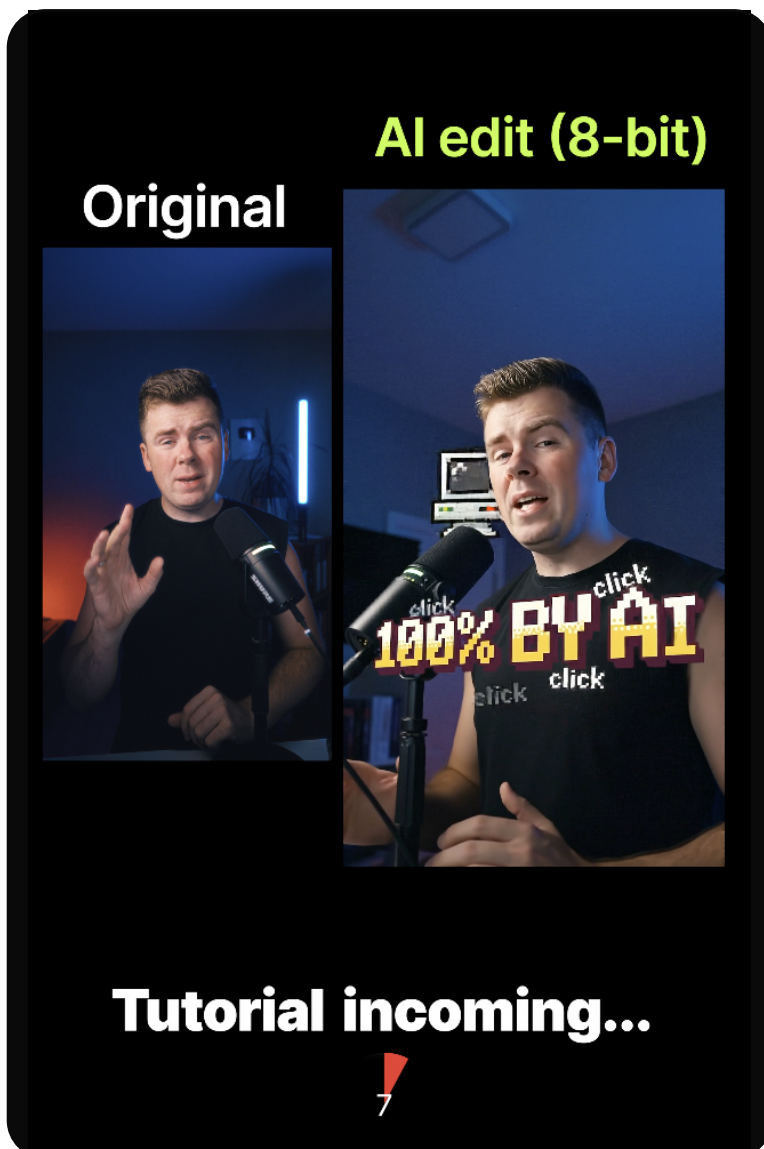

OPEN GOOGLE FLOW

IMPORTANT PROMPT NOTE

Upload the raw video and your font/style reference, then paste the complete prompt.

before / after example

Raw talking-head footage transformed into a cinematic 8-bit creator edit.

what the prompt adds

01 8-bit typography

Oversized captions, layered text and pixel-game styling.

02 camera movement

High/low-angle reframes, punch-ins, zooms and glides.

03 sound design

Chiptune SFX, clicks, impacts, risers and transitions.

04 subject protection

Keeps the speaker, shirt color, gestures, audio and lip-sync.

BEST RESULTS

Include your full spoken captions inside the prompt when possible.

workflow steps

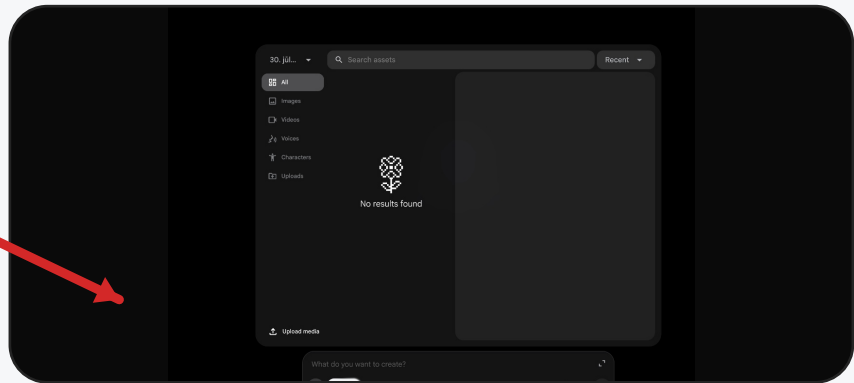

FLOW.GOOGLE

UPLOAD → PASTE PROMPT → GENERATE + EXPORT

1 upload the video

Open Google Flow. Upload the raw talking-head clip into the project media panel.

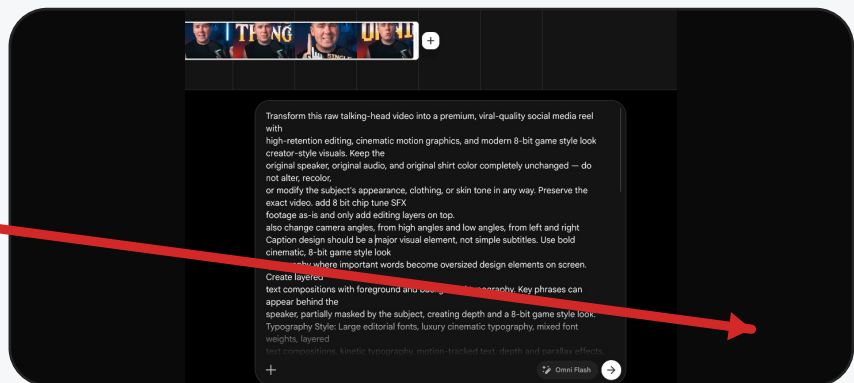

UPLOAD MEDIA

2 paste the prompt

Add the full prompt below, then select Omni Flash and submit the edit request.

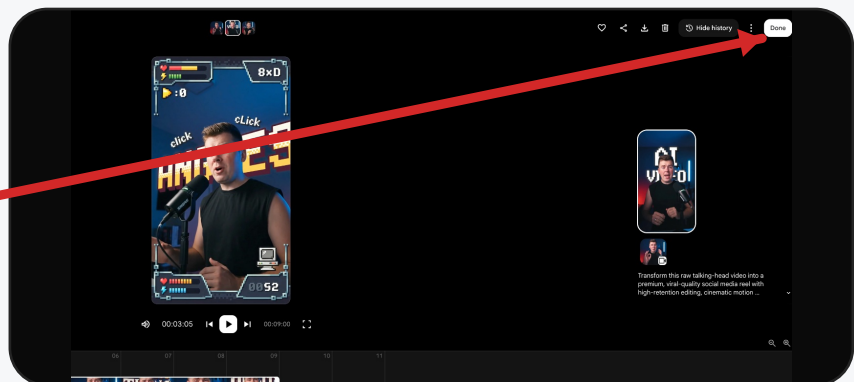

SUBMIT

3 review + export

Check the result, confirm audio and lip-sync, then download the final vertical reel.

DOWNLOAD

Tip: Regenerate any section where the face, shirt color, gestures, audio or captions drift from the raw clip.

main video prompt

COPY + PASTE INTO GOOGLE OMNI / OMNI FLASH

For best results, add the full spoken captions after this prompt and upload a font-style reference.

Transform this raw talking-head video into a premium, viral-quality social media reel with high-retention editing, cinematic motion graphics, and modern 8-bit game-style creator visuals. Keep the original speaker, original audio, and original shirt color completely unchanged - do not alter, recolor, or modify the subject's appearance, clothing, or skin tone in any way. Preserve the exact video footage as-is and only add editing layers on top. Add 8-bit chiptune SFX.

Also change camera angles, using high angles and low angles, from the left and right.

Caption design should be a major visual element, not simple subtitles. Use bold cinematic, 8-bit game-style typography where important words become oversized design elements on screen. Create layered text compositions with foreground and background typography. Key phrases can appear behind the speaker, partially masked by the subject, creating depth and an 8-bit game-style look.

Typography Style: Large editorial fonts, luxury cinematic typography, mixed font weights, layered text compositions, kinetic typography, motion-tracked text, depth and parallax effects, and premium 3D text treatments.

Color Style: Extract colors directly from the video footage and build the entire typography and graphic palette around the scene. Use mainly bright white with an 8-bit glow effect. Also use the yellow tones visible on the shirt logo as the primary accent color. Build yellow-based gradients blending with orange, red, burgundy, dark cherry, and warm highlights. All text colors must feel naturally integrated into the video's existing color palette. Important keywords should have unique gradient treatments and premium glow effects that complement - not clash with - the actual footage colors.

Whenever the speaker makes a strong point, create huge cinematic text moments. Let key words dominate the screen, use layered typography behind the speaker, and add scale animations, depth, shadows, lighting effects, and subtle motion.

Add dynamic zoom-ins, punch-ins, reframing, speed ramps, motion-blur transitions, and seamless camera movement. Add relevant B-roll, graphics, UI animations, visual metaphors, icons, callouts, 8-bit game-style motion graphics, and overlay effects to support the spoken content visually.

Add professional chiptune and 8-bit game sounds, including whooshes, impacts, swipes, clicks, risers, transition sounds, and subtle cinematic audio enhancement - all synced to the original spoken audio.

Maintain fast pacing with meaningful visual changes every few seconds to maximize retention.

The final output should feel like a premium reel edited by a top-tier content agency, with typography and captions acting as a central visual storytelling element. I am also sharing a font-style reference - match the typography aesthetic to that reference.

Make sure to follow the same hand motion and gesture as the uploaded video. Audio and lip-sync should remain similar to the raw video.

Opening shot: Make sure the video starts with a fast camera switch/glide to a high angle diagonally, with text appearing immediately.
