BATCH TIP

Add: "generate 10 images 1 by 1" at the start to make a full batch.

RESULT

COPY-PASTE MASTER PROMPT

Use this for one image or a multi-image upload.

MAIN PROMPT

Transform the uploaded images 1 by 1 into a premium pixel stretch digital artwork while keeping the main subject perfectly sharp, detailed, and recognizable. Preserve the original identity, silhouette, lighting, and composition of the subject. Extract the colors, textures, and atmosphere from the image and extend them outward into smooth, flowing pixel-stretch ribbons that follow elegant curves and dynamic motion. Create seamless transitions between the original photo and the stretched areas, with no glitches, broken pixels, or harsh edges. The stretched pixels should look silky, fluid, and organic-like streams of color, light, paint, smoke, or energy flowing through the scene. Maintain realistic depth, shadows, reflections, and natural lighting. Style: Adobe Photoshop pixel stretch effect, liquid motion blur, flowing light trails, abstract energy waves, gallery-quality digital artwork, modern minimalist composition, cinematic photography, 8K ultra-high resolution, premium social media aesthetic. Keep the subject untouched and crystal clear while the environment transforms into artistic flowing motion. (9:16, 4K)

GENERATE UP TO 10 IMAGES

To generate up to 10 images at once, upload up to 10 images and add this exact line at the start of the prompt:
generate 10 images 1 by 1

EXAMPLE 01: BEFORE / AFTER

Same subject. Original photo on the left, pixel-stretch result on the right.

BEFORE

AFTER

Original upload

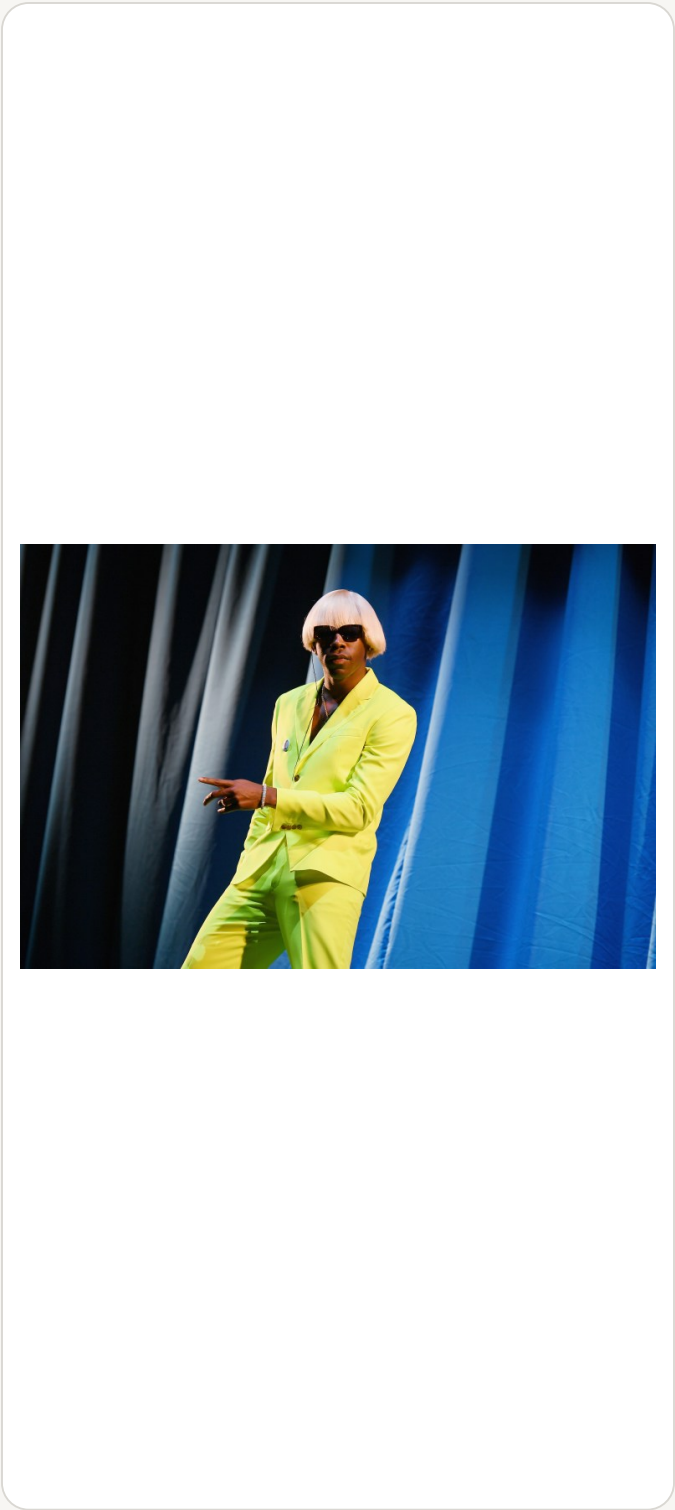

Pixel-stretch transformation

EXAMPLE 02: BEFORE / AFTER

Same subject. Original photo on the left, pixel-stretch result on the right.

BEFORE

AFTER

Pixel-stretch transformation

USE THIS WORKFLOW

- 1 Upload 1 to 10 images.
- 2 Paste the master prompt.
- 3 For a batch, add: "generate 10 images 1 by 1".
- 4 Keep the subject sharp while the background becomes flowing motion.

PROMPT PACK NOTE

This workflow is designed for ChatGPT image generation: upload the references, paste the prompt, and keep the batch line when you want multiple outputs.
