MAIN VIDEO EDITING PROMPT

Copy and paste exactly as written.

Keep the person's exact performance, motion, timing, identity, face, hair, clothing, lighting, background and camera framing unchanged - frame for frame. Turn their pretend nose-pull into a real, exaggerated rubbery cartoon effect - smooth and clean, with no glitching, flickering or warping artifacts. The moment the fingers grip the end of the nose, the nose begins stretching outward, following the hand movement exactly and in sync from the video. As the hand pulls away, the nose stretches long and thin like soft putty, and the surrounding face pulls with it - the nostrils, cheeks and upper lip drawing forward and elongating along with it, the whole centre of the face drawn out into a long tapering shape. The stretched nose sags and droops downward under its own weight as it gets longer, heavy and slack rather than stiff. When the fingers let go and release, the nose does NOT snap back - it stays stretched and dangles loosely, hanging down under gravity and swinging with a slight wobble before settling. Keep the eyes, identity and skin tone consistent throughout, and keep the mouth movements matched to the original speech. Photorealistic skin texture with cartoon-physics deformation, realistic weight, soft motion blur. (4k quality).

QUICK WORKFLOW

Upload the original video

OPEN GOOGLE FLOW

<https://labs.google/fx/tools/flow>

01

Prepare

Use a short, pre-recorded nose-pull clip.

02

Upload

Click +, then Upload media.

03

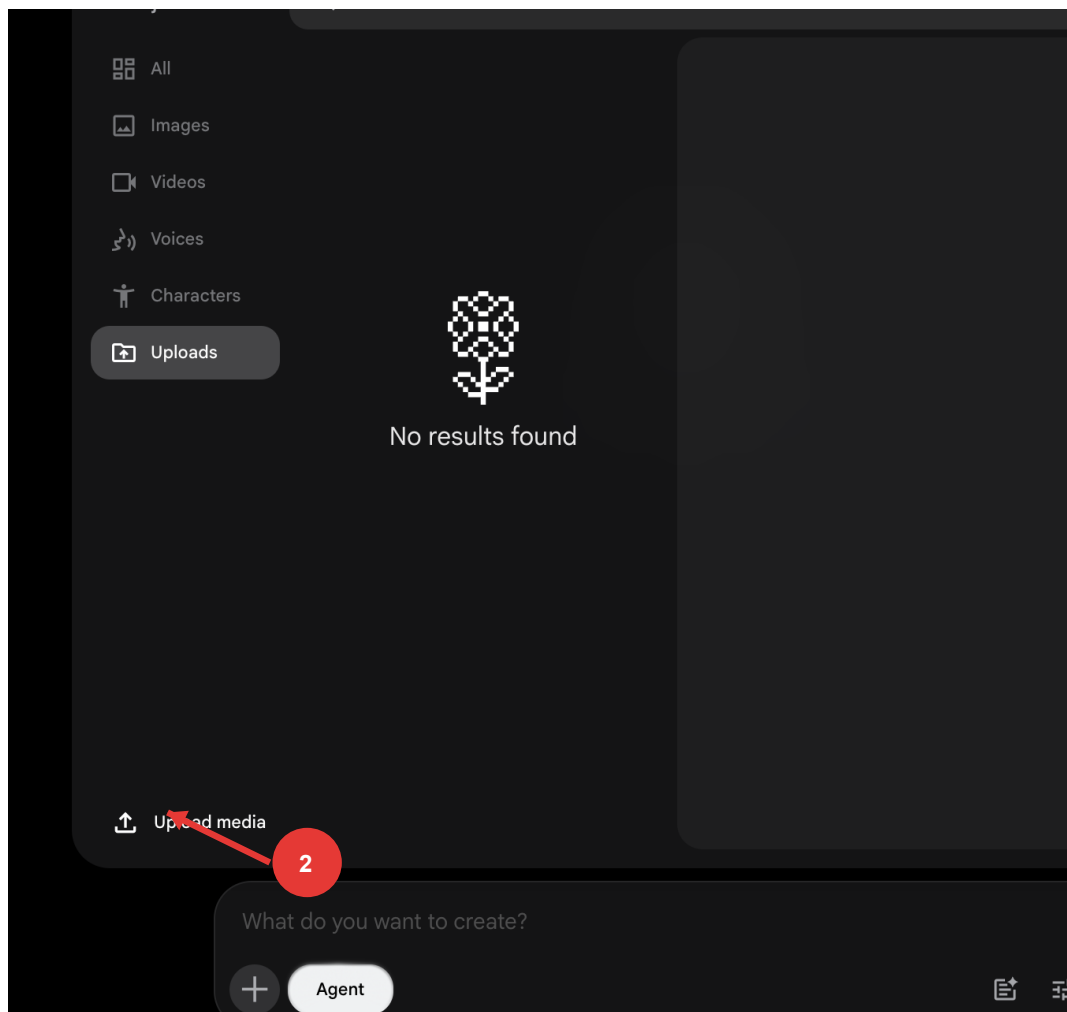

Prompt

Paste the page-one prompt.

04

Generate

Submit, review, then export.

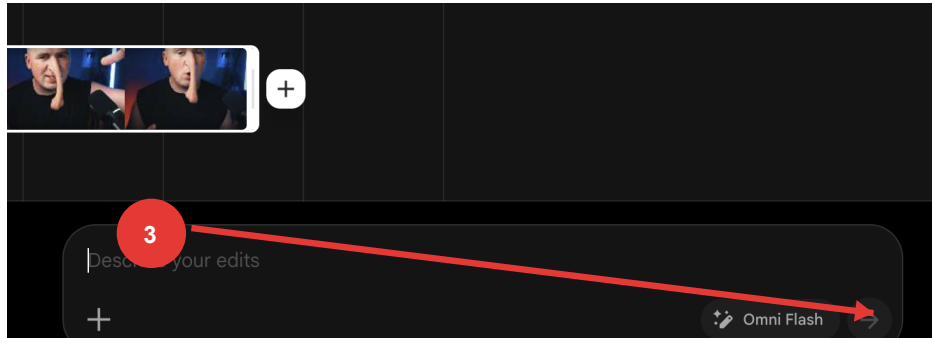

1. ADD YOUR CLIP

PROMPT + GENERATE

Create the stretched-face edit

Select the clip, paste the prompt, choose Omni Flash when available, then submit.

2. PASTE THE PROMPT

3. REVIEW THE RESULT

RESULT EXAMPLE

Check three things

- The nose follows the fingers in sync.
- The face stretches smoothly without flicker.
- After release, it hangs and settles naturally.

If the effect glitches, regenerate from the same original clip.
